

TSC8000

Touch Screen Controller

Customers requiring the latest in technology can find familiar touch screen control capability in the New DSI Touch Screen Controller for Optical Turnstiles. The DSI Touch Screen Controller (TSC) interfaces with remote I/O modules through a dedicated wireless Ethernet network. The TSC can wirelessly monitor and remotely control up to 8 lanes of Optical Turnstiles in one sleek, easy-to-use device. Customization is available. Please contact DSI for additional information and pricing.

FEATURES & BENEFITS

- Easy installation
- Wireless

Touch Screen Controller

PRODUCT DESCRIPTION

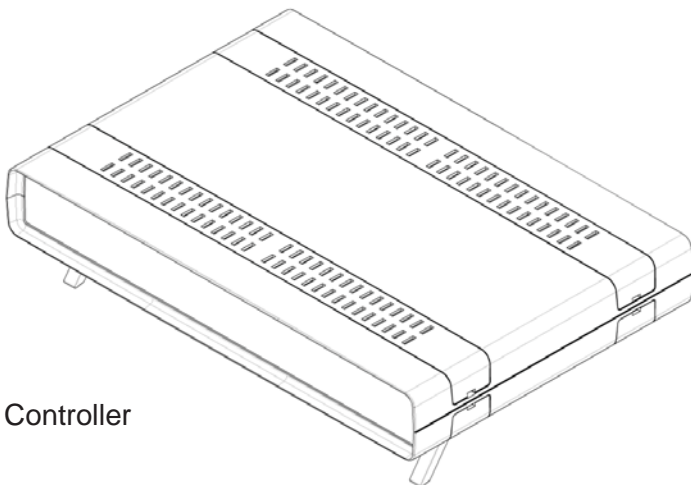

The TSC provides an efficient means of interface allowing easy control of the turnstiles nearby or on the other side of the building. The TSC displays the lane configuration with on screen indicators and control buttons for easy lane operation. The TSC includes a touch screen, router and controller. It is intuitive and requires no special training to operate. Turnstile alarm conditions are audible and visual. Capable of having up to 4 touchscreen tablets with each control system.
